

Mohammed Faizan

ASSOCIATE DEVOPS ENGINEER

mohammedfaizanhere@gmail.com | +91 9108137445 | [linkedin.com/in/faizan9/](https://www.linkedin.com/in/faizan9/) | github.com/im-faix

PROFESSIONAL SUMMARY

Associate DevOps Engineer with 1+ year of professional experience in Linux, Kubernetes, AWS, Terraform, Docker, Jenkins, Argo CD, Helm and observability. Hands-on experience supporting **2 production and 5 lower environments** hosting approximately **40 microservices** across on-premises and cloud infrastructure. Experienced in Kubernetes operations, CI/CD and GitOps, stateful platforms, centralized logging, monitoring, disaster-recovery automation, TLS lifecycle monitoring and secrets management.

TECHNICAL PROFICIENCY

Cloud & Networking: AWS (EC2, VPC, S3, IAM, CloudWatch, Security Groups, Route 53), Linux, DNS, HTTP/HTTPS

Containers & Orchestration: Kubernetes, kubeadm, CRI-O, WeaveNet CNI, Helm, NGINX Ingress, Docker, Docker Compose

IaC & Automation: Terraform, Remote State, S3 Backends, Bash/Shell, Cron, Ansible.

CI/CD & GitOps: Jenkins Declarative Pipelines, GitHub Webhooks, Argo CD, Helm, Gitlab.

Observability & SRE: ELK Stack, Prometheus, Grafana, Alerting, etcd Backup/Restore, Incident Troubleshooting

Security & Secrets: HashiCorp Vault, Kubernetes RBAC, Network Policies, AWS IAM, SSL/TLS

Data & Streaming: Apache Kafka, Elasticsearch, MongoDB, PostgreSQL

Programming: Shell / Bash, Core Java, Python (Basic).

PROFESSIONAL EXPERIENCE

Associate DevOps Engineer — FireFlink | Jul 2025 – Present

- Supported DevOps and SRE operations across **2 production and 5 lower environments** hosting approximately **40 microservices** on on-premises and AWS/EC2 infrastructure.
- Bootstrapped and maintained self-managed Kubernetes environments using kubeadm, CRI-O and WeaveNet, supporting deployments, ingress routing, networking and workload troubleshooting.
- Built Jenkins declarative CI/CD pipelines integrated with GitHub webhooks for application build, containerization, validation and deployment workflows.
- Implemented GitOps deployment workflows using Argo CD and Helm, maintaining declarative Kubernetes configurations in version control and supporting controlled releases and rollbacks.
- Performed operational maintenance and rolling-upgrade activities for stateful platforms including Apache Kafka, Elasticsearch and MongoDB, with focus on persistent storage and service continuity.
- Implemented centralized logging with ELK and monitoring with Prometheus/Grafana to improve service visibility and incident investigation across environments.
- Automated Kubernetes control-plane disaster recovery by engineering Bash and Cron-based etcd snapshot workflows, enabling standardized and repeatable recovery procedures.
- Implemented proactive Shell and Prometheus alerting for SSL/TLS certificates and domain expiry, enabling advance detection and renewal before expiration.
- Provisioned AWS infrastructure components including VPC, EC2, Security Groups, IAM and S3-backed Terraform state using reusable IaC patterns.
- Integrated HashiCorp Vault with Kubernetes for secrets management and dynamic secret injection, reducing reliance on hardcoded credentials.
- Applied Kubernetes RBAC, network policies and AWS IAM controls following least-privilege security practices.
- Automated configuration and version management across device-farm machines using Ansible, enabling centralized execution of updates and consistent configuration across multiple connected machines

DevOps Trainee — QSpiders | Aug 2024 – Jun 2025

- Developed hands-on foundations in Linux administration, Shell scripting, Git, Maven, Jenkins, Docker, Kubernetes and AWS through structured DevOps training and practical exercises.
- Worked with containerization, CI/CD workflows and Kubernetes deployment concepts, building troubleshooting and automation skills used in subsequent professional DevOps work.

SELECTED DEVOPS / SRE PROJECTS

- **Kubernetes Infrastructure & DR:** Self-managed Kubernetes operations with kubeadm, CRI-O, CNI, ingress and automated etcd snapshot/restore workflows.
- **Observability & Logging:** ELK, Prometheus and Grafana for infrastructure/application visibility, monitoring and operational troubleshooting.
- **TLS & Domain Monitoring:** Shell and Prometheus-based certificate/domain expiry monitoring with proactive alerting.
- **GitOps Delivery:** Jenkins CI combined with Argo CD and Helm for version-controlled Kubernetes deployments and release automation.

EDUCATION

Bachelor of Computer Applications (BCA) — SRNMN College of Applied Science | CGPA: 8.72 | 2021 – 2024
